I I	HealthMate™	HealthMate Plus™	Allergy Machine™	Pet Machine™	Bedroom Machine™
Overview	Austin Air's tried-and-true original, the HealthMate is used by countless thousands of allergy and asthma sufferers worldwide to reduce symptoms and improve indoor air quality. The solid, reliable performance of the Health-Mate is enhanced by its far reaching ability to eliminate the allergens, microbials, smoke, odors and gases that wreak havoc on our health and everyday lives.	The variety of chemicals to which we are exposed in our indoor air has grown into the thousands. Since public health experts agree air quality is linked to asthma and allergies, limiting exposure to indoor air pollution is vital. The HealthMate Plus is by far the best in its class at removing particulates and the broad spectrum of gaseous toxins and VOCs known to be linked to respiratory illness and disease.	If you have asthma or suffer from bouts with allergies, the Allergy Machine could be your ticket to freedom. Austin Air designed this machine especially for you. It provides exceptional HEPA performance for particle removal, and its advanced military-grade HEGA carbon cloth easily cleans air of heavy gaseous pollutants, like tobacco smoke, odors, vapors and fumes. Customers overwhelmingly give the Allergy Machine "two thumbs up."	Got 5 cats and a dog, and pet odors driving you crazy? Or has vacuuming up pet hairs become a full-time job? Or maybe you or your spouse is allergic to your pets? Whatever your pet peeve, say hello to the Austin Air Pet Machine. Designed for pet owners, everyone in your home, including your pets, will benefit from the clean, fresh allergen-free air produced by the Pet Machine.	Sleep is crucial to good health and well-being. The most benefits occur during uninterrupted night-time sleep (7-8 hours for adults). Night-time sleep routinely interrupted by respiratory events has a detrimental effect on waking hours, and can cause or exacerbate health issues. By removing the irritants that disrupt sleep, the Bedroom Machine helps sleepers stay asleep and awaken refreshed.
